

SIDDHARTHA ACHARYA

iOS Developer · Swift · SwiftUI · Salesforce Mobile SDK · Offline-First Architecture

+91 7718796698 | siddharthaacharya2000@gmail.com | github.com/Siddhartha-Acharya | linkedin/siddhartha-acharya

PROFESSIONAL SUMMARY

iOS developer with ~4 years of production experience building and shipping Swift-native applications. Expert in Swift, SwiftUI, Combine, MVVM/Clean Architecture, REST API integration, OAuth 2.0 authentication flows, Firebase (FCM/APNs push notifications), offline-first local storage architecture, and performance optimization. Proven track record delivering complex, production-grade UIs and integrations using iOS (Xcode) and GitHub Actions pipelines in agile environments.

CORE SKILLS

Mobile Frameworks: Swift · SwiftUI · UIKit

Platforms & Build Tools: iOS (Xcode) · GitHub Actions · TestFlight · App Store Connect

Authentication & Security: OAuth 2.0 · Connected Apps · JWT · Secure token storage · Keychain

Offline & Local Storage: Encrypted local DB (SQLite/Core Data) · Offline-first architecture

Real-Time & Networking: REST APIs · URLSession · Async/Await · Socket.IO · Combine

Integrations & Push: Firebase (FCM, APNs, Analytics, Deep Linking) · Stripe SDK · Universal Links

Salesforce (Preferred): Salesforce Mobile SDK · SmartStore · SmartSync · Connected Apps · REST APIs

UI & Architecture: MVVM · Clean Architecture · Coordinator · Reusable component libraries

WORK EXPERIENCE

iOS Developer · Selegic India Private Limited Apr 2022 – Present (~4 years) | Kolkata, India

Built and shipped three production iOS apps (Yoga & Meditation, Fitness & Diet, Social Media) and the Selegic CRM iOS app (mirroring the web version) — all delivered with MVVM + Clean Architecture and extensive REST API integration.

- Architected and delivered end-to-end iOS apps using Swift/SwiftUI; maintained build pipelines via Xcode and GitHub Actions for TestFlight and App Store deployment.
- Implemented OAuth 2.0 and token-based authentication flows with secure credential storage in Keychain, enforcing strict sequential auth (token → profile fetch → socket connection) to prevent race conditions.
- Built offline-first experiences with encrypted local SQLite and Core Data stores: paginated REST API sync, cache bookmarking, and full data reload on org-switch — directly analogous to SmartStore/SmartSync patterns.
- Developed real-time data pipelines using Combine/Async-Await and Socket.IO, managing subscriptions, stream transformations, and efficient UI bindings for 60 fps rendering under high-frequency updates.
- Integrated Firebase services: push notifications (FCM/APNs), deep linking, Universal Links, and analytics event tracking.
- Integrated Stripe SDK for secure in-app payments: tokenization, error state handling, and payment confirmation flows.
- Added MapKit + Core Location features for real-time address resolution and location updates.
- Built reusable SwiftUI component libraries (custom animated components, CRM module UIs for Account, Contact, Opportunity, Lead) enabling faster iteration across projects.
- Collaborated with UI/UX designers to implement responsive, accessible interfaces from Figma specs, and with backend/Salesforce teams to ensure robust API integration.
- Conducted code reviews, established team-wide architecture and coding standards, and mentored junior developers.
- Participated in agile ceremonies, sprint planning, and JIRA-based task management.

Software Developer Intern · Selegic India Private Limited Apr 2022 – Jun 2022 | Kolkata, India

- Designed and developed iOS applications using Swift, SwiftUI, and Xcode as part of onboarding to production codebases.
- Built animation-rich UI components and contributed to UI/UX design direction for iOS features.

PERSONAL PROJECTS

AI Chat App — Conversational AI iOS Application

- Built a SwiftUI-based AI chat application integrating large language model APIs via REST, with streaming response rendering and persistent conversation history using Core Data.

- Implemented MVVM architecture with Combine-driven state management, secure API key storage in Keychain, and a custom animated message bubble UI.

Health Tracker — Cycling, Running & Walking Activity Monitor

- Developed a SwiftUI fitness tracking app using Core Location and MapKit to measure real-time speed, distance, and route for cycling, running, and walking sessions.
- Integrated HealthKit for activity data read/write, built live metrics dashboard with animated progress rings, and persisted session history in Core Data with offline-first support.

Weather App — Location-Aware Forecast Application

- Built a SwiftUI weather app using Core Location for automatic location detection and a third-party weather REST API for current conditions and 7-day forecasts.
- Implemented Combine-powered data pipeline with async/await networking, local caching for offline access, and dynamic UI theming based on weather conditions.

EDUCATION

B.Tech · Electronics & Communication Engineering 2018 – 2022 | CGPA: 7.875 / 10

Swami Vivekananda Institute of Science & Technology, Kolkata

LANGUAGES

English · Bengali · Hindi
